

Harun Muthuri Murithi

Is a plant pathologist in the Soybean Innovation Lab project focusing on identifying soybean pathogens, characterizing the isolates and rating key diseases and pests in the Pan African Trials. He is interested in host-pathogen interactions to understand the mechanisms of pathogen development in order to guide in development of control interventions. He has over seven years of experience working on soybean pathogens with particular emphasis on soybean rust based at IITA -Tanzania

His seminar will highlight the major diseases and pests of soybean in Africa focusing on symptoms, ratings and management.
